Principal Software Engineer

Candidate: Mohammad Azam Shaikh **Seniority:** Senior

Strong candidate for Principal Software Engineer position

Strongest Evidence

- Experience with cloud infrastructure (Azure, AWS) and knowledge of Azure resource providers, platform extensibility, and security, compliance, or responsible AI concepts.

Critical Gaps

- Lack of specific examples of AI-powered developer services built

Existing Keywords

- cloud infrastructure
- Azure
- AWS
- AI-enabled system design
- Production RCA & performance tuning

✖ Missing Keywords

- planet-scale platforms
- enterprise trust, security, and reliability

Requirement Analysis

Requirement	Evidence	Status	Recommendation
10+ years of industry experience building and shipping software using modern programming languages such as C#, C++, Java, Go or Python	Mohammad Azam Shaikh has 10+ years of experience across C#, Python, JavaScript, SQL, and cloud platforms (Azure, AWS)	Strong	Strong
Experience with cloud infrastructure (Azure, AWS) or equivalent	Mohammad Azam Shaikh has experience with cloud infrastructure (Azure, AWS)	Strong	Strong
Knowledge of Azure resource providers, platform extensibility, and security, compliance, or responsible AI concepts	Mohammad Azam Shaikh has knowledge of Azure resource providers, platform extensibility, and security, compliance, or responsible AI concepts	Strong	Strong

Recommendations

- Consider additional experience with planet-scale platforms and enterprise trust, security, and reliability

Interview Risks

- Lack of specific examples of AI-powered developer services built

ATS Assessment

ATS Strengths

- Technical skills match job requirements
- Relevant experience in cloud infrastructure and AI-enabled system design

ATS Risks

- Lack of specific examples of AI-powered developer services built
